DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1 3, and 4 are rejected under 35 U.S.C. 102(e) as being anticipated by Smith et al. US Patent No. 6,536,428. Referring to claims 1 and 4, Smith discloses a ventilation system and/or breathing tube that comprises a reverse flow adapter, the reverse flow adapter adapted to be coupled to the unilimb breathing circuit for permitting inspiratory gas 17 (see figure 2) to travel within an outer tube 10 (see figure 2) of the unilimb breathing circuit, and for permitting patient expired gases 18 (see figure 2) to travel through an inner tube 11 (see figure 2) of the unilimb breathing circuit for exiting through an aperture formed in the reverse flow adapter (see figure 4).

Referring to claim 3, Smith discloses an apparatus that comprises an intermediate adapter 5 dimensioned to engage the reverse flow adapter, the intermediate adapter comprising a nipple, the nipple comprising a passageway formed therethrough for the exit of inspiratory gases therefrom, wherein the nipple is dimensioned to be received by a connector formed on the nasal cannula assembly or the simple facemask assembly (see figure 1).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over Smith et al. US Patent No. 6,536,428 in view of Needham US Patent No. 3,995,625. Smith discloses the applicant's invention as claimed with the exception of providing a flow diluter.

Needham discloses a inhalation devices that does provide a flow diluter. Therefore it would be obvious to one in the ordinary skill of the art to modify Smith's invention by providing a flow diluter in order to improve the breathing procedure.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
